Construction of Sb₂O₃/Bi₂S₃ core-shell nanocomposites as highly efficient antimonate anodes for rechargeable Li-S batteries. We report on the design and synthesis of core-shell nanocomposites consisting of Bi₂S₃ nanocrystals (NCs) encapsulated within amorphous antimonate (ASb) shells. These materials are used as anodes for Li-S batteries, exhibiting excellent capacity (up to 1,200 mAh g⁻¹) and high coulombic efficiency (over 99.5%) after 50 cycles at a current density of 0.1 C. The superior performance of the nanocomposites is due to the efficient energy and electron transfer between the active components. FBI's Use of Stingray Devices Exposed Private Conversations of Americans On July 25, the Washington Post reported that the FBI uses high-tech devices called cell site simulators, or "Stingrays," to "undermine the security of cell phones and other wireless devices, snoop on innocent people and spy on friends, family and co-workers." These devices are used to find the location of individuals by mimicking cellphone towers. Stingrays are used in so-called "national security" investigations, particularly by federal and local law enforcement agencies. These agencies can use Stingray devices to locate a mobile phone and intercept communications and data stored on it. Stingray devices allow police to also capture emails, instant messages, and phone calls from targeted individuals. The FBI has used this technology for quite some time. The Post reports that agents deployed Stingrays after the 9/11 attacks to find suspects who might have been in communication with the hijackers. The FBI also used the technology during the Los Angeles riots, and has deployed Stingrays in Boston during Occupy protests and the 2012 presidential election. Though Stingrays are deployed by law enforcement agencies, they are typically used in investigations of suspected terrorists. However, they are often used against other groups, including organized crime. When used against these groups, Stingrays typically get the entire history of a targeted phone, including calls, 2d92ce491b
