I'm seeing this in some CMakeLists.txt files: # Eigen3 include path for Eigen set(EIGEN3_INCLUDE_DIR \${EIGEN3_INCLUDE_DIR};!;../Eigen3;\${EIGEN3_INCLUDE_DIR}/unsupported) What does;! mean? Is this something specific to Eigen3? What does it mean? A: ! is a macro that takes one or more strings and concatenates them. What! will do is print the string that precedes it, which could be a description, a name, or some identifier. The tokens will open and close the macro. What!; is used to expand all of the tokens in the macro to the value that follows it, and then print the result of the macro expression. In this case, what's going on is that the ; is used to separate the result of the macro expression from the result of the concatenation of the remaining macro arguments. This way, you can simply print the entire expression by just printing the resulting value of the macro, which was left unquoted. This is an example of macro pre-processing that allows you to write very generic code, by allowing you to do common string operations without requiring the user to do them explicitly. In this case, it allows you to put the location of Eigen3's headers in the include path, which lets Eigen3
