is that sort of thing you're looking for? A: You're looking for a URL shortener. Basically it takes long URLs (like and produces short URLs (like to be pasted on places like reddit, facebook, blogs and social media accounts (and maybe where you want them to appear). There are different ways to do this. One is to use your own server (like in the case of imgur), but there are other services like bit.ly, tinyurl or duckduckgo which allow you to redirect URLs to other URL shorteners (see duckduckgo.com). So what happens is that your URL is processed by the URL shortener, which generates a new URL that you need to paste in the right place. Note that you'll have to signup for a URL shortener account (to make sure you can actually make some profit), but then your link will be public (i.e. you'll have a permanent URL like this and that can be used for posting links, so people will actually click them. A: The problem is that these links are considered too long and are truncated by the sites which do the URL shortening. For example, the image link you provided is being shortened to You have a few options, some free and some not: You can try to go to the original source and ask them to shorten their links, but I don't think that would work. If you are willing to pay a fee, there are paid services that can shorten your links. There are some free ones too, but I have never used one myself so I don't know. If you are willing to make your own shorten URL service (which might be a good idea in order to get some money for your own purposes), there are several frameworks that make this very easy. You can see examples of these frameworks here. CASE PRESENTATION ===== A 33-year-old female presented to the emergency department with epigastric and submandib 2d92ce491b
