Up until now I had been using a hacked `sxswi\xf8ks\xe9.exe` with `Ctrl+Alt+Del`, which I believe does not work in the Windows 8.1 and newer versions. Is there an updated one, for Windows XP, 7, 8, and 10? I tried searching but the `sxswi apps` page does not offer a working solution. Any ideas to create a better keygen? A: This is a `keygensuffix.com` keygen free download. Q: Using a custom view from within a custom view I'm trying to create a custom view that contains another custom view. I've created both of these views in `res/layout` and set them up like this:

```
MainActivity public class MainActivity extends Activity { @Override protected void onCreate(Bundle savedInstanceState) { super.onCreate(savedInstanceState); setContentView(R.layout.activity_main); } public void myView1(View view) { //do something in the Main Activity to change the UI } public void myView2(View view) { //do something in the Main Activity to change the UI } } res/layout
```
