In vivo effect of the new PTH(1-34) amide analogue [Nle8,18,Tyr34]bPTH(1-34)amide on gene expression in the proximal renal tubules. [Nle8,18,Tyr34]bPTH(1-34)amide is a new amide analogue of PTH(1-34), which possesses a greater anabolic effect than the parent peptide on bone and on serum calcium. The aim of this study was to evaluate its in vivo effect on the gene expression of proximal renal tubule, by using a competitive RT-PCR technique. Overnight fasted rats were submitted to a single injection of 20 microg/100 g bw of [Nle8,18,Tyr34]bPTH(1-34)amide or vehicle, and were killed 4 h later. During this period, plasma PTH and calcium levels had increased significantly and returned to baseline values after 4 h. Total RNA was isolated from renal cortical tubules, and the expression of 18 genes encoding for proteins of tubular transport system (Na+, K+-ATPase, Na+/H+, HCO3- -cotransporter, and urea transporter) was investigated by using a competitive RT-PCR technique. For each gene, the
